

WEST WINDSOR TOWNSHIP  
GREEN DEVELOPMENT PRACTICES CHECKLIST  
7-16-10

The "Green Development Practices" are intended to function as "guiding principles" for all Site and Subdivision applications in West Windsor Township. Each applicant shall be expected to responsibly incorporate as many of these items, as practical, into the project design. The practices are offered as a checklist to enable flexibility to be progressive and innovative, since many of these practices are still being incorporated into the mainstream realm of the development industry. It is expected that these items will facilitate more sustainable development. Sustainable development seeks to balance environmental, economic and social aspects of a proposal such that the resultant neighborhood or business will be efficient in cost, impact and function. This list is not intended to be exclusive; incorporation of additional "Green Development Practices" similar to these items is strongly encouraged to help achieve the goal of making West Windsor Township a more sustainable community.

By incorporating this checklist into the Township plan submission checklist, developers will be encouraged to consider "Green Development Practices" with the genesis of the project program.

Township staff will be using this checklist to review the "green" character of an application.

Applicants will be asked to provide testimony and support documents to describe the actions or practices that will be incorporated into their proposal, including verification subsequent to implementation.

WEST WINDSOR TOWNSHIP  
GREEN DEVELOPMENT PRACTICES CHECKLIST  
7-16-10

- 1 Specify only indigenous plant species within 3,000 feet of the Township Greenbelt. Completely avoid exotic invasive plant species anywhere in the Township. Township will maintain a list of species to avoid. LANDSCAPE

Project will implement this practice – YES \_\_\_\_\_  
Describe how this practice will be implemented and the benefits -

---

---

---

Project will not implement this practice – NO \_\_\_\_\_  
Reason this practice can not be integrated into this project -

---

---

---

- 2 Develop landscape and stormwater maintenance specifications that employ integrated pest management post-bond to assure implementation for five years after occupancy LANDSCAPE

WEST WINDSOR TOWNSHIP  
GREEN DEVELOPMENT PRACTICES CHECKLIST  
7-16-10

- 5 Develop innovative and progressive stormwater best management practices that embrace ecosystem-based, natural and sustainable versus artificial and high-maintenance means of treating storm water quality at the conceptual design phase (e.g., raingardens; bioretention swales / basins). Sand bottom basins are not considered sustainable since they are not ecosystem-based. STORMWATER

Project will implement this practice – YES \_\_\_\_\_  
Describe how this practice will be implemented and the benefits -

---

---

---

---

Project will not implement this practice – NO \_\_\_\_\_  
Reason this practice can not be integrated into this project -

---

---

---

---

- 6 Re-think stormwater management – do not think of stormwater as a by-product – manage stormwater as a resource. Implement stormwater harvesting elements such as collection of stormwater in cistern that is pumped into a building for water closet flushing, or into a water feature using solar-powered pumps. STORMWATER

Project will not implement this practice – NO \_\_\_\_\_  
Reason this practice can not be integrated into this project -

---

---

---

WEST WINDSOR TOWNSHIP  
GREEN DEVELOPMENT PRACTICES CHECKLIST  
7-16-10

- 9 Apply the following site planning techniques from the West Windsor Township high density housing ordinance to all applications - *Site planning should respect climate and wind orientation to ensure proper building siting enabling energy conservation (e.g., maximize southern building exposure for use of solar energy, consider proper wind orientation to reduce negative effects of cold winter winds and to take advantage of cooling summer breezes). Implement landscape that reinforces these techniques.* ENERGY

WEST WINDSOR TOWNSHIP  
GREEN DEVELOPMENT PRACTICES CHECKLIST  
7-16-10

This list of green building practices includes suggested additional elements that can be incorporated into building design. These tend to introduce sustainable design practices into the building itself as opposed to the previous checklist which focuses on site improvements. These are offered as supplemental ideas for applicant consideration and discussion with the Township; the Applicant is not obligated to provide specific intentions on any of these at this time.

Water Use Reduction

Maximize water efficiency within buildings - use high efficiency fixtures, dry fixtures such as waterless urinals, and occupant sensors to reduce the potable water demand. WATER

Recycled Content

Specify a minimum of 25% of building materials that contain in aggregate, a minimum of 20% post-consumer or 40% post-industrial recycled content material. RESOURCES

Construction IAQ (Indoor Air Quality) Management Plan

Develop and implement an IAQ Management Plan for the construction and pre-occupancy phases of the building. Can use the Sheet Metal and Air Conditioning National Contractors Association (SMACNA) IAQ Guideline for Occupied Buildings under Construction, 1995. AIR

Low-Emitting Materials

Reduce the quantity of indoor air contaminants, e.g., VOCs from adhesives, sealants, paints, composite wood products and carpet systems, that are odorous or potentially irritating to provide installer and occupant health and comfort. AIR

Commissioning

Verify and ensure that fundamental building elements and systems are designed, installed and calibrated to operate as intended. ENERGY

Green Roofs

Implement green roof planting on flat roof multi-story buildings – alternatively implement light color for roof surface. ENERGY

Energy Star

1) Incorporate Energy Star-labeled building products, lighting, heating and cooling, appliances, and plumbing. 2) Achieve Energy Star certification for residential or commercial buildings. (see: <http://www.energystar.gov/index.cfm?c=home.index>) – ENERGY
