WAIVER APPLICATION

Grease Control Ordinance -West Windsor Code Chapter 133

Requirement to Install an External Grease Interceptor

Directions: This application shall be used by Retail Food Establishment applicants when site restraints which interfere with the installation of an external grease interceptor (EGI) in accordance with West Windsor Township Code, Chapter 133-28 are present. Please note that the financial costs associated with installation of an EGI do not justify issuance of a waiver. Each application will be reviewed independently once the waiver request is deemed as a complete submittal. The applicant should not proceed until a determination has been reached as the approval of a waiver is not guaranteed.

Facility _____ Location _____

RFE Owner _____ Phone _____

Property Owner _____ Phone _____

Reason waiver is requested:

- Insufficient space available.
- Utilities would require relocation.
- Physical obstructions exist.
- The sewer main exiting the retail unit is directed under an adjacent tenant space prior to leaving the footprint of the structure.
- FOG is an unlikely discharge from the establishment because the following equipment WILL NOT be located onsite: fryer, grill, charbroiler, rotisserie, griddle, wok; AND the menu does not include significant grease or fat-laden foods.
- Other (Specify) _____

Owner Certification Statements (If the establishment owner and property owner differ, please provide both.)

I hereby certify that the information provided on this form is true and accurate. I also understand that approval of this application does not waive the requirement to ensure that sanitary wastes discharged from the establishment/site contain fats, oil and grease (FOG) in concentrations below 100 ppm.

RFE Owner _____ Date _____

Property Owner _____ Date _____
Signature

Professional Certification (The signature and seal of a New Jersey licensed Engineer or Architect are required.)

A site evaluation was performed to determine the feasibility of installing an external grease interceptor for the establishment and revealed that the existing physical conditions on the property prohibit installation of an EGI as specified above.
