Sexting

Definition: Sexting is the slang term for the use of a cell phone or other similar electronic device to distribute pictures or video of sexually explicit images. It can also refer to text messages of a sexually-charged nature.

Sexting

- **Sexting** (a portmanteau of **sex** and **texting**) is the act of sending sexually explicit messages or photos electronically, primarily between cell phones.
- the act of text messaging someone in the hopes of having a sexual encounter with them later; initially casual, transitioning into highly suggestive and even sexually explicit

Sexting

•While it may be shocking, the practice of "sexting" - sending nude pictures via text message - is not unusual, especially for high schoolers around the country.

•In October a Texas eighth-grader spent the night in a juvenile detention center after his football coach found a nude picture on his cell phone that a fellow student sent him.

•Roughly 20 percent of teens admit to participating in "sexting," according to a nationwide survey (pdf) by the National Campaign to Support Teen and Unplanned Pregnancy.

•Courtesy CBS News

Sexting

•The image was blurred and the voice distorted, but the words spoken by a young Ohio woman are haunting. She had sent nude pictures of herself to a boyfriend. When they broke up, he sent them to other high school girls. The girls were harassing her, calling her a slut and a whore. She was miserable and depressed, afraid even to go to school.

•And now Jesse Logan was going on a Cincinnati television station to tell her story. Her purpose was simple: "I just want to make sure no one else will have to go through this again."

•Courtesy Today Show

Sexting

•The interview was in May 2008. Two months later, Jessica Logan hanged herself in her bedroom. She was 18.

Sexting

Posting private identity information online puts teens at risk of unwanted invitations for sex.

☐ *True* ☐ *False*

False. Contrary to media hype, the typical online child predator does not carefully piece together identity information to locate and abduct unwilling teens. More typically, teens who go off with adult predators go willingly after a period of online romantic and sexual talk. It's the *combination* of talking sexually to a stranger and providing private identity information that is risky.

Teens who post sexy photos online are more likely to receive sexual invitations from strangers.

☐ *True* ☐ *False*

True. If you post sexually provocative photos of yourself online, you are probably going to get more contacts from strangers. And some of those contacts may be aggressive and scary. Some will be from adults and some will be from other teens.

Sending sexy photos of yourself or other teens over the Internet may result in these photos being passed around the Internet.

☐ *True* ☐ *False*

True. Strangers who ask for sexual photos of teens may end up passing them along on the Internet, in violation of child pornography laws. These laws say that the possession, distribution, or production of sexual images of minors is a crime. There has been at least one case in which a boyfriend and girlfriend who e-mailed intimate photos of themselves back and forth were arrested for child pornography.

Your Online Audiences

Deciding how to present yourself online is a bit more complicated. For one thing, you cannot always know who your audience is.

Social networking sites may feel as private as hanging out with your friends. In reality, they are vast public spaces where privacy settings may or may not provide the kind of privacy you expected.

Do you know that…

- The content you post on profiles and blogs sticks around the Internet forever—even after you decide to take it down.
- The information, photos, and videos you post about yourself can be found easily by searching, sometimes even if you thought you marked them private.
- The content you create—photos, drawings, videos, writing—can be copied by anyone and used for any purpose without your permission.
- Even if you use privacy controls offered by social networking sites, there are always invisible audiences, that is, audiences you didn't intend to see your stuff. Sometimes you might not care, but other times you might.

Who Else Controls Your Image?

It's not enough to think about how *you* present yourself. Your friends on social networks, video and photo sharing sites, and blogs may also share information about you. Check around. Are your friends posting photos of you and tagging them so that everyone knows what you are doing? Do your friends leave posts on your profile that reveal more about you than you want others to know?

Be CyberSmart!®

- Explore the privacy tools on the sites you use and decide how public or private your stuff should be.
- Consider your "invisible" audience when you post online. And remember that there is no guarantee of privacy online.
- Monitor what others are posting about you in comments, photos, videos, and blogs.
- Read the Privacy Policy or Terms of Service of any network you join. Understand what information about you is collected and how it is sold to and used by others.

Cell Phone Safety

Using Wireless Devices More Safely

- Nearly half (47%) of US teens say their social life would end or be worsened without their cell phone, and nearly six in 10 (57%) credit their mobile device with improving their life, according to a national survey from CTIA and Harris Interactive.

Using Wireless Devices More Safely

- Four out of five teens (17 million) carry a wireless device (a 40% increase since 2004)
- **Impact on Teen Life**
  - A majority (57%) of teens view their cell phone as the key to their social life.
  - Second only to clothing, teens say, a person's cell phone tells the most about their social status or popularity, outranking jewelry, watches and shoes.

Using Wireless Devices More Safely

- **Providing Entertainment and Security**
  - More than half of the respondents (52%) agree that the cell phone has become a new form of entertainment.
  - One-third of teens play games on their phone.
  - 80% say their cell phone provides a sense of security while on the go, confirming that the cell phone has become their mobile safety net when needing a ride (79%), getting important information (51%), or just helping out someone in trouble (35%).

Using Wireless Devices More Safely

- **Providing Entertainment and Security**
  - Teens carry cell phones to have access to friends, family and current events.
  - Though only one in five (18%) teens care to pinpoint the location of their family and friends via their cell phone, **36% hate the idea of a cell phone feature that allows others to know their exact location.**

Using Wireless Devices More Safely

- Texting Replacing Talking
- The study also confirmed that texting is replacing talking among teens. Teens admitted spending nearly an **equal amount of time** talking as they do texting each month. The feature is so important to them that if texting were no longer an option 47% of teens say their social life would end or be worsened - that's especially so among females (54% vs. 40%).

Using Wireless Devices More Safely

- Texting Replacing Talking
- With more than 1 billion text messages sent each day, it is no surprise that 42% of teens say they can text blindfolded, the study found.

Using Wireless Devices More Safely

- Cell phone usage by 10 to 17 year olds can be as high as 3 to 4 hours a day
- 44% of teens said they use text messages as their primary source of communications
- With text messages being sent from the movies and the dinner table
- 26% said it's the first thing they do in the morning

Using Wireless Devices More Safely

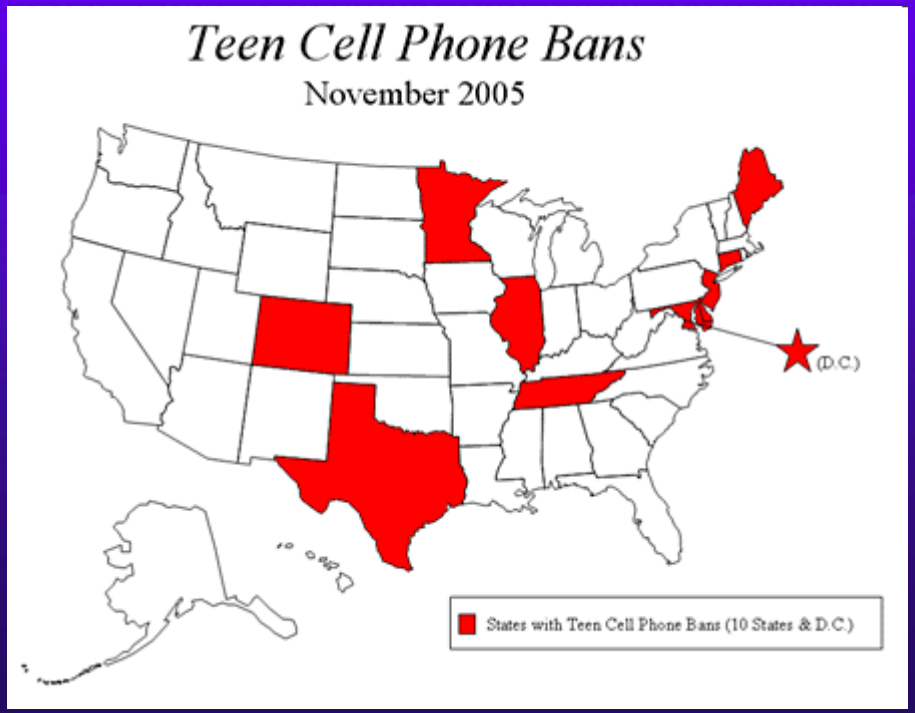
- What is the problem ?
- Cell phones are used to
  - Transmit inappropriate pictures of friends
  - Harass others with hate messages
  - Use text messages to send answers during tests
  - Take pictures of exams and send them to friends

Using Wireless Devices More Safely

- They are also used to
  - Make drug transactions
  - Make contact with child predators masking themselves as other teens
  - Countless other crimes
  - Distract teen drivers and cause countless motor vehicle accidents

Using Wireless Devices More Safely

- Set appropriate ground rules for use of wireless devices. (Contract)
- Decide who they may communicate with and how they may use these devices.



West Windsor Police

Using Wireless Devices More Safely

- Monitor your wireless bill to keep track of the amount of time your children spend talking and sending messages and with whom.
- Pay special attention to numbers or messages from people you do not recognize or have not approved.

Using Wireless Devices More Safely

- Teach your students to tell you if anyone sends them a threatening or frightening message.
- If your students are being stalked, harassed, or threatened in any way, report the incident to the Police

West Windsor Police

Using Wireless Devices More Safely

- Consider creating settings to control or prohibit access to the Internet, e-mail, and text messaging through your children's wireless device.
- Remember a global-positioning system (GPS) option, if offered by your service provider, could be used to help locate your children if lost.

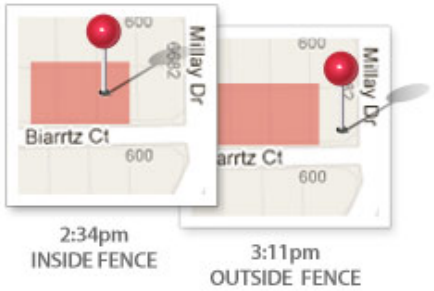
Watch Over Phone Usage with eBLASTER Mobile for Android

Monitor the activity on an Android phone from anywhere: at work, at home, on a business trip, on vacation – even if you're thousands of miles away.

With eBLASTER Mobile, you'll see:

If Children or Employees Are Where They Are Supposed To Be

Set up virtual fences around key locations, such as malls, parks, beaches, movie theaters, sports facilities, work locations ... and be notified when children or employees enter or leave these important places.



SMS/Text Messages

Get transcripts of text message conversations – every word that was typed on both sides of the conversation. Know who said what to whom and when.

Web History

Review the address of EVERY website they visit. Find out if children or employees are visiting inappropriate websites and how frequently they are visited. Know if they are spending all day surfing when they should be doing something else.

Location

Find out where children or employees are and when they were there by using the GPS or cell site location

Voice Call Log

See when and who children or employees are calling and for how long. Find out if people are talking on the

Rachael was stalked online by an anonymous bully.

She died by suicide on October 9, 2006.

More students disciplined following girl's suicide

March 30, 2010 | By the CNN Wire Staff

Share Mixx Twitter Email
Recommend 6,019 people recommend this. Be the first of your friends.

Phoebe Prince, 15, who had recently moved from Ireland, committed suicide in January in Massachusetts.

More students have been removed from a Massachusetts school in the investigation of the alleged bullying campaign against a 15-year-old girl who committed suicide, a school official said Tuesday.

Nine students at the school have been charged in what a prosecutor described Monday as a months-long campaign of bullying that led to the suicide in January of Phoebe Prince.

"We have taken disciplinary action with an additional small group of students and they have been removed from the high school," Christine Sweklo, assistant superintendent of South Hadley, Massachusetts, public schools said Tuesday in a news release. She did not provide details on the number of students, their identities or what involvement they might have had in events leading up to the suicide.

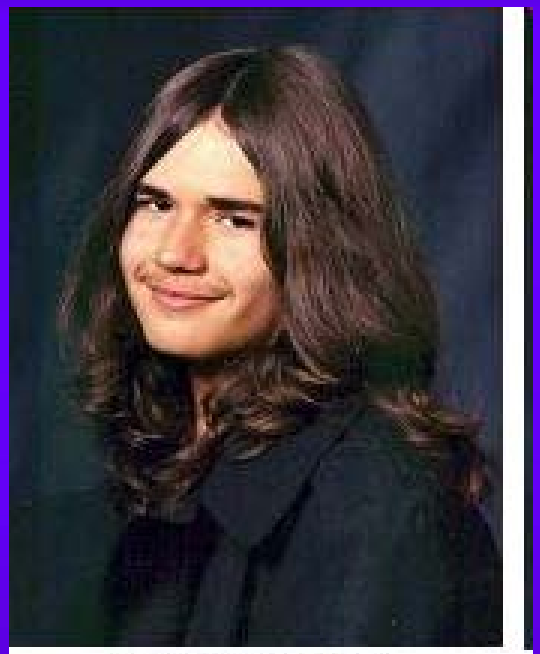
Police



Jeffrey Johnston

Jeffrey's mother Debbie Johnston writes, *"With the keyboard as his weapon, the bully violated the sanctity of my home and murdered my child just as surely as if he had crawled through a broken window and choked the life from Jeff with his bare hands. It was not a death that was quick and merciful. It was carried out with lies, rumors and calculated cruelty portioned out day by day."*

Patrick Kohlmann

I am a thirteen year old boy at Udall Road Middle school in West Islip, NY. My name is Patrick Kohlmann and I am a victim of bullying. I am not afraid to stand up for what I believe in. I have been called many names and have been abused by my peers more times than I can remember.(examples are: being called a *gay fag,* being thrown into lockers, pushed down stairs, etc.)

I am tired of letting the bullies get away with what they are doing! I want this to end. It will not be easy and I realize this, but I would like to help others hoping that no one else will have to go through the torture that not only me, but thousands, maybe even millions have gone through.

Cyberbullying

- Home is no longer the safe zone
  - Internet is the new playground
    - Instant Messaging
    - E-Mail
    - Blogging
    - 24 Hours a day, 7 days a week
  - 58% have not told their parents or any adult about something mean or hurtful that happened to them

Cyberbullying

- **Are you a cyberbully?**
  - Often, people who are victims are also bullies. Before you feel too bad for yourself, take the quiz below to find if you, too, are part of the cyberbullying problem!

Have you ever...

___Signed on with someone else's screen name to gather info?

___Sent an e-mail or online greeting card from someone's account?

___Impersonated someone over IM or online?

___Teased or frightened someone over IM?

___Not told someone who you really are online, telling them to "guess"?

Cyberbullying

- The best way to counter this problem is by teaching our children (and ourselves) to Take 5! - put down the mouse and step away from the computer.
- By not reacting and taking the time to calm down, we can avoid becoming a cyberbullying ourselves.
- What can we do for 5 minutes to help us calm down? Kids have suggested: throwing a baseball or shooting hoops, baking cookies, reading, napping, taking a walk or a run, watching TV, talking to a friend and hugging a stuffed animal.

Cyberbullying

•Before sending that e-mail or posting on that Web site or bulletin board, think before you click “send.” **Re-read what you were going to send.** If it meets any of these factors, don’t send it until you fix them. And if you can’t fix them, maybe you shouldn’t send it at all.

•It’s so easy for anyone to misunderstand e-mails and cybercommunications. We have to be very very careful to make them clear and help others to understand what we really mean. We also need to be careful not to hurt others and be good netizens.

Cyberbullying

- Start by making sure you are sending things to the right place, that it arrives and that the right person gets it.
- Is it worth sending? Don't waste peoples' time or bandwidth with junk, chain e-mails and false rumors
- Proofread and spell-check your e-mails and make sure they know who you are
- Don't attack others online, say anything that could be considered insulting or that is controversial
- Don't forward other people's e-mails without their permission or share their personal information (BCC)
- Are you angry when you are writing this message?
- Don't reply to spam, even to ask to be removed from their mailing list
- How private is the message you are sending? Are you willing to have others read this message or forward it to others without your permission?

Cyberbullying

•Our kids need to know that the online services and ISPs will provide their identity pursuant to legal process. And they can be found and held responsible for what they say and do online. It's very important that we teach our children to understand accountability, online and offline. Schools can be very helpful here. Unfortunately, sometimes when cyberbullying occurs the schools get involved in trying to discipline the students for off-hours and off-premises activities, often to their detriment.

2007 TOP TEN REVIEWS GOLD AWARD

Simply put- the Internet can be dangerous and contains unacceptable content. Children can be protected with filtering software and **this is the best**.

- Top Ten Reviews

Integration With Popular Search Engines

The new Net Nanny integrates seamlessly with "Safe Search" options found in popular search engines such as Google, Yahoo, Dogpile, AltaVista, Lycos, AllTheWeb, and MSN. This means your children can't search on a search engine and even see links to blocked sites. This new feature enables better protection against pornographic images when doing an "image only" search. If a child attempts to turn off the safe search capability from the search engine, Net Nanny will turn it back on in real-time as the search is occurring. The only way to bypass the safe search is with your unique administrator password, which only you as the parent knows. Believe it or not, Net Nanny actually blocks content in multiple languages to provide even more enhanced protection for your family.

More than Just Web Protection

Did you know that there are many ways your children can access pornography and questionable content on the Internet. Net Nanny provides full protection on not just the World Wide Web, but also less known but equally dangerous parts of the Internet like the Usenet, Peer-to-Peer downloading networks, Chat Rooms, Instant Messages, FTP, Forums and email. If you have never heard of some of those areas of the Internet, it is possible that your kids have. But don't worry. Net Nanny knows about them, and protects your children from the bad content on them.

Enhanced Reporting

Already recognized as best in class, Net Nanny reports have provided parents with a first class presentation of Internet activity of children. As a parent you will know what sites your children have visited, and what sites they have attempted to visit. You will also be able to see full text of the actual Instant Messages. Net Nanny empowers parents to monitor and or block children's access to certain areas of the Internet. *Internet Predators don't have a chance against parents armed with Net Nanny.*

Remote Management

Net Nanny has enhanced its administration tools. Powerful Remote Management tools exist to help parents to manage and maintain Internet policies remotely if an Internet connection exists. Monitor web browsing and instant messaging **from anywhere!**

Control Your Internet with the

iBoss™

Available online at www.iPhantom.com

The iBoss™ is a revolutionary Internet management device that is powerful and extremely easy to use. Incorporating state of the art hardware architecture, the iBoss™ provides a PC or network with total Internet control, allowing a user to manage their Internet connection. Users can block access to specific categories of Internet destinations, online applications, and manage time spent using specific online programs (i.e. online chat and messenger programs, file sharing, web browsing). The iBoss™ generates reports on Internet activity which can be viewed and automatically E-mailed. Unlike software solutions, one device guards an entire network and makes tampering difficult. Little computer experience is needed!

- **Restrict Internet Access to:**
  - Web browsing
  - E-mail and online chat
  - P2P file sharing
  - And more...
- **Control Internet Rules**
  - Simple category blocking
  - Application based blocking
  - Advanced custom blocking
- **Prevent Identity Theft**
  - Stop Phishing attempts
- **Prevent Viruses & Spyware**
  - Block malicious websites
- **Monitor & Log Activity**
  - View detailed reports
  - Automatically E-mail reports
- **Simple Plug & Play**
  - No software or computer experience required
- **Powerful Hardware**
  - Faster than software
  - Tamper resistant
- **Hassle-Free**
  - One device protects a single PC or entire network
- **Limit Internet Access Time**
  - Easy schedule based control
- **Compatible**
  - Windows®, Mac®, Linux®
- **State of the Art Hardware**
  - Featuring Freescale™ Technology

The iBoss™ makes it easy to manage a single PC or an entire network.

TV Timer - BOB

The Latest in Electronic & TV Time Management.

BOB helps parents monitor and manage the time their children spend using in-home media. BOB is an easy to use, small device that sits next to a TV, video-game system or computer. The power cord from one of these devices plugs into the back of BOB and is locked in place. Then, BOB plugs into an electrical outlet. After set up – a process that takes about three minutes – the machine monitors the amount of time a child spends using that media device.

Parents decide an acceptable amount of viewing time for each child **per day** or **per week**. Specific time periods can be blocked entirely for studying, chores, family time, or sleeping. Each child in the house (up to 6 users) has a four-digit PIN that they enter before they can turn on the attached device. BOB tracks the time used. A "master pin" allows a parent to turn on the connected device at any time.

VIDEO CLIP

Watch the Demo Video

When a child's preset viewing time expires, BOB shuts off the attached TV, video-game system or computer and won't allow it to be turned on by that user for the remainder of the day (or week).

Features:

- Personal PIN access for every family

Help keep your family safer

It's easier than ever to keep track of your kids' online activities with Windows 8. You can monitor their Internet use, block or allow access to certain websites, and choose which games or apps your kids can access. To turn on Family Safety, at least one designated adult needs an administrator account, and a standard user account is needed for each child who will be monitored.
